Akai Professional announces MPD32 Software Controller

Akai Professional has announced the release of the MPD32 pad controller. The MPD32 is Akai Professional's new flagship pad controller for musicians and DJs. Using a USB cable to connect to a PC or Mac, the MPD32 [hardware](#) is perfect for hardware control of popular music programs such as Reason, Ableton Live and GarageBand.

The MPD32 is the only pad controller on the market to feature the renowned MPC Note Repeat with swing and gate time parameters. Additionally, it is the only pad controller that can also work as a master clock for MIDI sequencers. With the built in Tap Tempo button musicians can control tempo [in real time](#) during performances.

Sixteen velocity and pressure-sensitive genuine MPC pads provide the industry's finest feel and expression. Akai has delivered the best quality pads on the market and an unprecedented number of assignable MIDI controllers, including eight assignable faders, eight assignable switches and eight assignable 360° knobs. Three selectable control banks extend the number of available faders, buttons and knobs to 24 each (72 total controllers). Four pad banks allow for 64 total pads.

The MPD32 also features transport controls for interfacing with DAW/sequencing applications like Sonar, Cubase and Logic. The MPD32 is a fully programmable controller and multi-functional control surface that fits perfectly within any production or performance environment.
